

TC Trustee® Premier

Save time and money with custom hosted payment pages.

TC Trustee® Premier hosted payment pages deliver secure e-commerce payment acceptance, reduced PCI scope, and branding continuity all with minimal development effort.

Reduce PCI Scope

Providing maximum PCI scope reduction, TC Trustee® Premier allows merchants to accept e-commerce payments securely by keeping payment data out of the merchant’s web server. This solution is hosted by TrustCommerce, eliminating the need for merchants to capture, transmit, or store sensitive payment information, which greatly reduces PCI scope.

How It Works

TC Trustee Premier is an e-commerce payment capture solution via hosted payment page that utilizes secure tokens.

- » Clients only need to pass the ‘amount’ and ‘unique identifier’ (for example, order number,

ticket, member number, etc.) to TrustCommerce.

- » Sensitive data is not transmitted in the clear.
- » Merchants are able to see tokens, but never full cardholder data.
- » The payment page is managed by TrustCommerce and hosted on our PCI-compliant servers.

Flexible and Customized

Designed for i-Frame, modal windows, or standalone pages, payment pages are designed to be mobile-friendly/responsive providing the ability to scale automatically for desktop, tablet and mobile use. TC Trustee Premier seamlessly matches client’s specific style and/or CSS providing a consistent, uninterrupted checkout experience.

Cost-Effective

TC Trustee Premier is ideal for those who have limited IT resources, internal budgets, or hosting capabilities. TrustCommerce develops the payment page, which allows clients to be up and running quickly, significantly reducing development time and eliminating the need for clients to write code.

TC TRUSTEE® PREMIER
